Enhancing weakest knowledge point and improving learning performance with personalized learning

Background

Singapore is a unique country that invests heavily in education and yet, maintains an open-door policy to welcome young and talented foreign students. That is because the Singapore government believes in competency-based education and meritocracy. The investment in education amounts to 3-4% of GDP yearly. With the competition between students in primary and secondary schools becoming more heated, Singapore families spent \$1.4 billion on tuition in 2019, more than double the amount of \$650 million spent 15 years ago in 2004.

Client

Led by two Doctorate candidates, Fun Learner's School is an Edtech Learning Centre with a 15-year track record in providing K12 online & offline lessons, curriculum design and teachers training. The learning centre's role in education is to equip students with studying strategies and exam tactics for optimal academic performance. The subjects covered are English, Chinese, Math and Science, and the levels taught range from pre-Primary to Primary and Secondary. To date, they have 4 outlets in Singapore, and have taught more than 13,689 students, many of them scholars and university graduates.

Challenge

In traditional education, the students often play a passive role, completing tasks as directed by the teacher. Moreover, the operation and labor cost is very high since the face-to-face teaching mode is still popular in Singapore. With technology development, Fun Learners' School like to collaborate with Bamboo System Technology to transform their business mode.

Apart from other tuition centres, Fun Learners School like to provide interactive learning content to stimulate student learning interest and improve learning performance. It is very important to have a learning management system to create and store learning materials including courseware and questions.

Moreover, teachers' workload is very heavy which are not able to grasp every student knowledge weakness and design targeted teaching. With more and more students enrolled in Fun Learners School, it is imminent to improve teaching and management efficiency.

Solution

One of Fun Learners' School main reasons for choosing BambooCloud was a desire for excellent user experience and speed of implementation. BambooCloud provide powerful built-in courseware authoring tool to easily upload videos, build quizzes, and organize all learning content. Teachers are able to create engaging content with videos, Powerpoint slides, PDF and questions. Students will be able to access the course content with mobile device including laptop, mobile, tablets anytime, anywhere.

Moreover, BambooCloud allows teachers to create question bank in the system. They can batch upload questions with Excel and Word template first then add video explanation for each question.

The BambooCloud platform's data analysis system also helps to identify student learning issues and generate student learning report based on knowledge. "When we showed one of our student parents how we use Spotzon, he was really impressed with the system," says Chee Chin Yong.

- Provide best learning materials and question bank
- Student Do practices and take exams anytime,
 - anywhere

Admin

- Enhance weakest knowledge point with knowledge-based practice
- Create course content in a few minutes and reduce teacher's workload
- Teacher Identify student learning issues and goals in advance
 - Formulate targeted education strategies to explore each student's potential
 - Monitor all students' online learning activities
 - Generate student learning reports and analyze teaching performance
 - Store and manage course materials more efficiently

Knowledge System

"BambooCloud is precise in identifying areas to increase student engagement which leads to significant improvements in results. As a teacher-and-student-centric selfadaptive online learning platform, BambooCloud makes it easy to produce personalised and targeted learning content for each student in the blink of an eye! In addition, BambooCloud analytics has proven that the most successful learners are those who are actively engaged. The resultant data provides users with insights into areas to focus on to improve student engagement and consequently their results."

Chee Chin Young, Principal

Result

In just over three months, Fun Learners' School has used BambooCloud learning management system to launch over 120 courses with 2400 course materials and 100000 questions, a pace they don't see slowing down.

There's a cross-functional advantage to using BambooCloud Online Learning System because it helps teachers from different subjects get on the same platform about how our teaching process work and who is responsible for particular course or programme. It also helps us standardize across our outlets and makes sure we are being consistent. Online Learning Platform is the way it allows student to view video explanation of particular question after taking online exam or practice, which leads to higher levels of thinking and better learning ability.

One of the most important features of the Spotzon

In addition, BambooCloud computed scores and generate knowledge radar chart automatically for each student. And students easily achieved personlized learning and improved learning performance after acknowledging his weakest knowledge. With Charts and tables, teachers can find the perfect way to get insights into their courses, the learning progress and performance of their learners and classes.

Fun Learners' School is keen to continue to explore more education method with BambooCloud in the future. Even post Covid-19, online learning will become more and more popular among primary and secondary students in Singapore. More interactive learning content, pedagogic innovations on teaching method and advanced learning analytics will keep them stay competitive and achieve better prestige in the market.
